عبدالله
السلولوم

Executive profile

A multidisciplinary economist, strategist, and technologist with a proven track record in economic policy, regulatory development, and financial innovation. Combines deep expertise in strategic modeling, advanced financial algorithms, and technology-driven systems with hands-on leadership in both public and private sectors. Recognized for bridging macroeconomic vision with practical execution, delivering impactful solutions across economic reform, digital transformation, and business development.

Strategic impact

- Advised on national economic policy and legislative reform, contributing to frameworks supporting non-oil economic diversification and fiscal sustainability.
- Led regulatory transformation initiatives within the Insurance Regulatory Unit, including the design and implementation of integrated digital systems (IruSoft).
- Developed and deployed models enabling real-time regulatory integration and enhanced supervisory effectiveness across market participants.
- Designed strategic economic frameworks addressing structural challenges in rent-based economies, with emphasis on export-led growth and institutional alignment.
- Built advanced financial and algorithmic systems for market analysis, risk modeling, and investment strategy across multiple asset classes.
- Contributed to public economic discourse through publications, research, and media engagement at regional and international levels.

Thought leadership

- Author of multiple economic works addressing sustainability, macroeconomic transformation, and financial systems, including best-selling publications.
- Actively contributes to regional and international economic discourse through publications, research, media engagement, and conference speaking, providing analysis on structural economic challenges, policy reform, and long-term development strategies.
- Recognized through professional engagements, speaking invitations, and awards for contributions to economic thought, public discourse, and applied financial innovation.

Experience

Over 17 years of experience in leadership roles, including:

Chief Executive Officer

Abdullah Al-Salloum Consulting Co. (present)

Acting Director of Supervision and Inspection

Insurance Regulatory Unit (to 2022)

Director of Strategic Research and Development

Insurance Regulatory Unit (to 2022)

Advisor to the Minister

Ministry of Commerce and Industry (to 2021)

Expertise

Economic Systems Architecture • Policy-to-Execution Translation • Regulatory Technology Integration • Strategic Economic Modeling • Complex Systems Thinking (Economic & Institutional) • Algorithmic Financial Engineering • Institutional Digital Transformation • National Digital Infrastructure Strategy • Legislative and Regulatory Design • Cross-Sector Strategic Integration • Economic Thought Leadership & Public Influence • Data-Driven Decision Systems

Qualifications

Master of Business Administration

عبدالله
السَّلُوم

Abdullah Salem Abdullah Al-Salloum — A multidisciplinary economist, strategist, and technologist with a proven track record in economic policy, regulatory development, and financial innovation. Combines deep expertise in strategic modeling, advanced financial algorithms, and technology-driven systems with hands-on leadership in both public and private sectors. Recognized for bridging macroeconomic vision with practical execution, delivering impactful solutions across economic reform, digital transformation, and business development.

Experience

عبدالله
السَّلُوم

Chief Executive Officer

Abdullah Al-Salloum Consulting Co. (Feb. 2024 — present)

Provides high-level advisory on economic policy, institutional reform, and digital transformation, supporting public and private sector leadership in strategic decision-making, economic structuring, and long-term development planning.

Acting Director of Supervision and Inspection

Insurance Regulatory Unit (Mar. 2022 — Aug. 2022)

Led regulatory supervision, strengthening enforcement mechanisms and institutional responsiveness through the deployment of integrated digital systems —IruSoft—, enhancing transparency, accountability, and service delivery within the insurance sector.

• **Related coverage** — The **Official Promotion** of IruSoft's Complaints Module, **Orientation** and **Service Promotion**.

Director of Strategic Research and Development

Insurance Regulatory Unit (Feb. 2021 — Aug. 2022)

Directed strategic policy development, regulatory frameworks, and executive bylaws to strengthen sector governance and alignment with national economic objectives. Led the digital transformation of the regulatory environment through the design and implementation of IruSoft; a unified platform enabling real-time integration with market participants. Advanced the adoption of supotech, regtech, and insurtech methodologies, and established cross-border institutional collaborations to enhance regulatory effectiveness and knowledge exchange.

• **Related coverage** — The **Official Promotion** of IruSoft's launch, **CNBC Arabia Interview**, **KTV News Interview** and **Almajlis TV News Interview**.

Advisor to the Minister

Ministry of Commerce and Industry (Jan. 2021 — Mar. 2021)

Advised on national economic policy and legislative reform, including the development of a strategic bill aimed at increasing non-oil exports and supporting structural economic diversification and fiscal sustainability.

Advisor to the Supreme Committee

Insurance Regulatory Unit (Jul. 2020 — Jan. 2021)

Provided strategic advisory on regulatory design, institutional development, and digital transformation, contributing to the modernization of supervisory frameworks and operational models within the insurance sector.

Founder

Dhammin (May. 2019 — present)

Conceptualized and launched a structured platform, establishing its governance model and operational framework to ensure scalability, sustainability, and alignment with market needs.

- Related coverage — Reports by **Kuwait Times** and **Alqabas** newspapers.

Founder and General Manager

AwdLabs (Jul. 2011 — Jan. 2021)

Established and led a technology-driven investment enterprise, developing advanced financial models and automated systems for market analysis and asset management. Delivered innovative solutions in algorithmic trading and risk identification, with applications across commodities and digital assets.

- Related coverage — Report by **Aljazeera**.

Founder and Publisher

Abdullah.com.kw (Jan. 2012 — present)

Developed a public-facing platform delivering economic research, policy insights, and financial tools aimed at enhancing financial literacy and supporting informed decision-making. Authored publications and contributed to public discourse on economic reform, sustainability, and policy development, while providing advisory services and capacity-building programs.

Consultant

KuwaitNET (Dec. 2005 — Jan. 2021)

Advised on the evaluation and optimization of financial and technical systems, ensuring performance integrity, scalability, and alignment with evolving business and technological requirements.

Board Member and Head of Business Intelligence

QuarterMile Automotive — Kuwait (Jan. 2003 — Feb. 2005)

Co-founded and led business intelligence functions, establishing data-driven financial and operational frameworks to support strategic planning, performance analysis, and organizational growth.

Published books

Sultan Of Najd

The throne advocating for fair wealth distribution

Aug. 2020 — A political-economic novel set during the Ukhaydhirid era, presenting a narrative that uncovers hidden aspects of financial administration and both domestic and foreign policies. The story highlights the transformations that led to macroeconomic reforms aimed at strengthening economic and political sustainability. The novel gained notable recognition, ranking third among best-selling Arabic literature and fiction books on Amazon.

Kuwait Of The Sustainability

Vision of a people, shaped from within

Nov. 2018 — A political-economic book focusing on the Kuwaiti economy, introducing the concept of a sound economic vision based on structural solutions targeting macroeconomic challenges. The book distinguishes between macroeconomics and microeconomics, emphasizing that micro-level reforms alone cannot achieve overall sustainability. It received official attention, with a copy presented to the then Prime Minister, His Highness Sheikh Jaber Al-Mubarak Al-Sabah.

• ISBN — 9781732537538 (paperback), 9781732537545 (ebook)

Kingdom Of The Vision

Within the conflicts of sustainability and rent

Jul. 2018 — An economic book providing a focused overview of Saudi Arabia's Vision 2030, analyzing its implementation mechanisms through the lens of macroeconomic theories. It connects the vision's strategic objectives with the scientific foundations of economic growth and structural transformation. The book achieved significant success, topping bestseller lists on Jamaloon and among Arabic books on Amazon.

Published studies

⇔ Sahel and the Great Automation

 Jan. 2026 — A high-level strategic analysis examining the “Sahel” platform as an entry point to reinterpret the state’s digital transformation from a comprehensive institutional perspective, moving beyond conventional technology-focused narratives toward a deep structural deconstruction of governance, data architecture, and system design. The study introduced an integrated analytical framework highlighting the gap between service digitization and the realization of a truly “smart state” driven by unified data and institutional intelligence. It identified critical structural challenges, including fragmented data governance, the absence of a centralized “digital brain,” inconsistent national data architecture, and disparities in operational culture across entities. The analysis further explored technical, cybersecurity, and user-experience dimensions, demonstrating that current digitization largely replicates legacy bureaucratic models in digital form. It concluded with a strategic blueprint for reengineering the state’s digital foundation—shifting from service digitization toward decision automation and the development of sustainable institutional intelligence.

⇔ Disparities in the Generosity of Economic Packages and Their Impact

 Sep. 2020 — A comparative economic analysis evaluating the effectiveness of stimulus packages during the COVID-19 period, with a focus on explaining disparities in their “generosity” across countries and their implications for Kuwait’s economy. The study approached the issue from a macroeconomic perspective, demonstrating the limited impact of such stimulus measures in a rentier economy that lacks a productive, export-driven private sector. It showed that liquidity injections do not necessarily translate into real value creation or sustainable growth under such structural conditions. The analysis further linked GDP composition to income sources, highlighting how the weak contribution of non-oil exports constrains the effectiveness of fiscal stimulus. The study concluded that meaningful reform requires transitioning toward an export-led economic model rather than relying on short-term stimulus policies.

⇔ The Truth Behind Kuwait's Budget Deficits

 Feb. 2020 — A comprehensive macroeconomic analysis uncovering the true structural causes behind Kuwait’s persistent budget deficits, moving beyond conventional narratives centered on waste or corruption. Developed an Economic Model of the State to illustrate the interaction between the government and private sector, highlighting the economy’s heavy reliance on oil revenues and the limited contribution of non-oil exports. The study further examined revenue and expenditure dynamics, distinguishing between internally controllable and uncontrollable factors, and introduced the concept of “book deficit” versus “real deficit.” It concluded that the core issue lies in the continuation of a rentier economic model, proposing a reform framework centered on transitioning toward a sustainable, export-driven economy with greater control over internal economic variables.

⇔ The Broad Scope of the Fund Law and Its Impact on Economic Direction

 Sep. 2019 — A critical analytical study assessing the impact of the broad scope of the National Fund for SMEs law on economic direction in Kuwait, with a focus on how flexible legal interpretation affects project selection and financing outcomes. The study identified structural inefficiencies stemming from the absence of clear economic criteria—particularly the weak linkage between funding decisions and productivity indicators such as non-oil exports. It further introduced an analytical model of Kuwait’s economic structure, highlighting the imbalance between public and private sector dependency. The study concluded with a set of legislative and institutional recommendations aimed at realigning the fund toward generating real economic value and supporting a transition to a sustainable, export-driven economy.

⇔ Kuwait's Economy Under the Pressure of Externally Uncontrollable Variables

 Aug. 2019 — An advanced economic report examining the impact of externally uncontrollable variables on Kuwait’s economic performance and fiscal sustainability, introducing a conceptual framework that distinguishes between “within-scope” and “out-of-scope” variables in both revenue and expenditure equations. The study employed statistical time-series analysis of public finance data, demonstrating that heavy reliance on oil revenues—an uncontrollable variable—is structurally matched by the continuous growth of consumptional expenditures driven by demographic factors beyond policy control. It further revealed that the core issue lies not in the apparent deficit itself, but in the exponential dynamics of these variables. The report concluded with a reform-oriented framework emphasizing the need to strengthen non-oil revenues and reduce dependency on uncontrollable factors, enabling a transition toward a more sustainable and self-directed economic model.

Legislative contributions

Law on Enhancing Non-Oil Export Output for the Private Sector

 Oct. 2021 — A strategic draft law to enhance non-oil export output of the private sector, aimed at reducing reliance on oil revenues and supporting economic diversification and sustainability. Designed an integrated institutional framework, including the establishment of an independent public authority and the development of economic indicators to measure private sector contribution and reduce dependency on government expenditure. The draft was submitted to the Office of His Highness the former Prime Minister and was adopted by several member of the parliament in their economic conferences, reflecting its impact on advancing economic reform discourse.

Software libraries

KNET PHP SDK

 Jul. 2018 — A PHP software development kit designed to integrate websites and applications with KNET, Kuwait's leading payment gateway. It enables secure payment processing, transaction handling, and seamless communication with KNET's API, including payment initialization, response listening, and completion workflows, with built-in security and testing support.

Open Accounting And Financial Tools

 Mar. 2017 — An open-source accounting and financial methodology developed using JavaScript, HTML, and CSS and released under a CCO license. It enables entrepreneurs and individuals to create comprehensive feasibility studies with minimal input, covering managerial, technical, financial, and market aspects, including pricing strategies. The framework also helps households optimize expenses, increase savings, and reduce liabilities, and extends to business valuation for acquisition or sale, improving decision-making and negotiation outcomes.
